

## **Master of Science in Data Science and Analytics**

**BATCH: 2019-21**

### **Introduction:**

In today's world the enormous amount of data is being generated continuously. This data flood has the potential to transform the way business, government, science and healthcare are carried out. The emerging discipline of data science and analytics holds the key to unlocking that potential. It uses automated methods to analyze massive amounts of data and extract knowledge from that. Data science combines aspects of computer science, applied mathematics and statistics.

With the exponential growth of Big Data over the past few years, the need for Data Scientists becomes more and more pronounced and urgent. The Master of Science (M.Sc.) programme in Data Science and Analytics is designed to meet such demands and train the next generation of data scientists. This is a two year postgraduate interdisciplinary course spread over four semesters.

The curriculum covers subjects such as probability and statistics, linear algebra, calculus, forecasting methods, operations research, Hadoop, R, Python, cloud computing and analytics using large data sets. Students have the opportunity to gain hands-on experience with a variety of analytical tools available for the purpose of structuring large data sets to unearth hidden information to allow the organizations to build and sustain a long-term competitive advantage. The capstone of the programme is a dissertation during final semester in which students apply the acquired theoretical knowledge in data science to solve real-world business problems. Ethical and leadership aspects will also be given covered.

### **Objectives:**

The broad objectives of the programme are as follows:

- To train and develop in depth understanding of the key technologies in data science and analytics: data mining, data visualization techniques, forecasting methods, and statistics.
- To provide opportunities of higher studies in the area of data science.
- To impart knowledge on various theoretical and practical aspects of data science.
- To practice problem analysis and decision-making.
- To gain practical, hands-on experience with statistical programming languages and big data tools.
